Keywords: MUSIL, RC8221 - RC8226 Disc Manipulator, Copy, Backup, Restore, Verify, Initialize.

---

Abstract: A manual for the use of the disc program 'MASS' which is described to handle RC3689 channel connected discs. The program is able to back up and restore (labelled or non-labelled) tapes, copy, verify and initialize a disc-kit with address marks.

5.	DOCUMENTATION .....	6

Faint, illegible text at the top of the page, possibly a header or introductory paragraph.

1. PURPOSE

1.

To provide the user with a general purpose program for handling discs connected to the RC3689 channel.

SECRET

1. The purpose of this document is to provide information regarding the activities of the [redacted] in the [redacted] area.

2. FUNCTION

2.

The program is able to back up and restore (labelled or non-labelled) tapes, copy, make a byte to byte comparison between two disc-kits and initialize a disc-kit with address marks.

The disc size is either 12/18/33/66/125 or 250 MBytes.

The source and destination drive can be any number (0 - 3).

1971

1. The first part of the report is devoted to a description of the experimental apparatus and the method of data collection. The second part is devoted to a description of the results of the experiment.

2. The results of the experiment are presented in the following table:

Table 1. Results of the experiment.

Table 1

### 3. DESCRIPTION

3.

When loaded the following list of functions will be displayed on the system console:

- 0) Help !
  - 1) Disc-copy program
  - 2) Dump a disc to magtape
  - 3) Restore a disc from magtape
  - 4) Verify a disc-kit
  - 5) Initialize a disc-kit.
  
- 0) Help :

Is a summary of this users guide.
  
- 1) Disc-copy program :

The simple copying will be followed by a read check to assure the disc pack to be error-free.
  
- 2) Dump a disc to magtape :

The operator is asked whether he wants to write a label tape. The label size is fixed and equal to 80 characters. The disc backup is stored as a single file on tape terminated by an End of File mark. The block size is equal to 4096 bytes or 8 disc sectors.

The tape must be mounted and positioned at load point before calling the tape program.

If the disc volume exceeds 33 MBytes it has to be handled multi-reel.

With the specified block size, the maximum which can be stored on a single 2400 feet tape is 33 Mbytes. The label will thus include a tape number which is automatically updated before the label is written on the next reel.

Dear Mr. [Name],

I have received your letter of the 15th and am sorry to hear that you are having trouble with your [subject]. I will do my best to help you.

I am sorry that I cannot be of more help to you at this time. I will be in touch with you again.

I am sure that you will understand my position. I will be glad to hear from you again.

I am sorry that I cannot be of more help to you at this time. I will be in touch with you again.

I am sure that you will understand my position. I will be glad to hear from you again.

I am sorry that I cannot be of more help to you at this time. I will be in touch with you again.

I am sure that you will understand my position. I will be glad to hear from you again.

I am sorry that I cannot be of more help to you at this time. I will be in touch with you again.

## 3) Restore a disc from magtape :

The operator is asked whether the tape is non-labelled or labelled. In the latter case the label will be displayed allowing the operator to confirm the tapenumber before the disc is further restored.

The errormessage 'Blockcount error' will be displayed, if the operator is handling a label tape as a non-label tape or vice versa.

## 4) Verify a disc-kit:

This is a mere read of the specified disc. In case of any CRC error the process will be break'ed and the usual error message will be displayed.

## 5) Initialize a disc-kit:

Address information (cylinder, head, and sector number) will be transferred to the specified dirve number. When the initialization is completed a verify phase as described in 4) will follow in order to catch any disc-kit defects.

1. The first part of the document

contains a list of the names of the persons who were present at the meeting. The names are listed in alphabetical order of their surnames.

The second part of the document contains a list of the names of the persons who were present at the meeting. The names are listed in alphabetical order of their surnames.

2. The second part of the document

contains a list of the names of the persons who were present at the meeting. The names are listed in alphabetical order of their surnames.

3. The third part of the document

contains a list of the names of the persons who were present at the meeting. The names are listed in alphabetical order of their surnames.

#### 4. ERRORHANDLING

4.

Emphasis has been placed on an easy and informative operator communication. Thus all the operator correctable errors are described in detail. In case of a hard error the process will be break'ed and the usual error message will be displayed.

The program generated error messages are :

- Block count error
- Driver missing
- Write ring not mounted
- Magtape station off-line.

1947

My dear Mr. [Name],

I have your letter of the 11th and am glad to hear that you are well. I am also well and hope these few lines will find you all the same.

Yours truly,

[Name]

[Address]

[City]

[State]
