

RC Highlights

1976 to 1977

RC's factory in Præstø, 80 km south of Copenhagen.

76-77

Production at the Præstø-plant of the RC 8000 computer is started. RC 8000 has been received with great interest on the export markets.

A total of 46 orders for RC 8000 have been received this year — of special interest is the installation at the telephone company Jydsk Telefon A/S. This enquiry system has been received with great interest also by US telephone companies. RC 8000 has also been delivered to manufacturing companies where it performs administration, invoicing, production and stock control.

RC 8000 is also used in the local government sector.

RC 7000 is now entirely RC-produced and is based on the RC 3600.

RC NET is developed — an advanced network system for efficient and rational control of communication among data processing systems in different geographical locations.

RC participates in the public debate regarding EDP-legislation and issues a draft for future EDP-legislation.

New production methods and increased resources at the factory in Præstø and in Glostrup have expanded RC's capacity.

Subsidiaries in Kuwait and France are established, and the German company is reorganized under the name of RC COMPUTER.

The divisions in Århus, from 3 different locations, are gathered in a new office building.
