RC Teledata
Order Module

GENERAL
The Order Module covers the functions relating to forward orders. The order types can be the following:

— reservation — back orders — sales order — quotations.

RESERVATION
Reservation cannot be accepted unles the actual inventory exceeds the required quantity. The quantity reserved is registered separately and cannot be disposed for other orders.

BACK ORDERS
Back orders can always be prepared, for example automatically in connection with normal invoicing. In connection with invoicing it may appear, for example, that a required quantity is not in stock, which may result in a back order (total order less actual stock) being prepared automatically.

SALES ORDERS AND QUOTATIONS
Sales orders and quotations can always be prepared, and do not prevent disposal of inventories. All other types may result in printing of order confirmation or quotations. Invoicing of orders may be done as invoicing of an order in whole or in part. Here it may be a question of specific order types or orders to be effected before a definite date. Seeing that the order module is fully integrated with the invoicing module the invoicing is triggered by a simple registration on the display unit, e.g.

- customer-no. - order-no.

Data are then transferred from the order module to the invoicing module. Invoicing and updating of debtor and inventory control modules are done automatically.

Many types of Inquiries on orders can be made to the module. For instance, information can be obtained on the contents of an order, on articles to be delivered to a specific customer in a specific time interval, back orders on a specific article, and so on.

Information on what is contained in order 22641 is fetched by the command:

RSO 22641

The system responds:

```
02 04 77 - 11.29
FOR ORDER NO.        22641
```

SER. NO.	ORDER TYPE	DELIV. DATE	ORDER REC. QUANT.	ORDER PLACED QUANT.	COMM. NO.	BA-LAN-CE	INV. AMOUNT
CUSTOMER NO.			1190				
1	1	31 07 77	10	10	70337
