RC 3500

units X - ref.

PREFACE

The purpose of this RC-3500 unit cross reference is to avoid confusion because of the random use of RC-sales numbers, producers sales numbers, and RC-technical numbers. Besides, it will help the RC service engineers to use RC technical numbers which are the only exact designations. (Technical numbers are to be used on service reports indicating the models concerned).

N O T E

Each RC-sales number covers more items (cables etc.) than mentioned in this list so the list may not be used for configuration purposes.

"Producer model" indicates the sales numbers used by the external suppliers. Most of those units are modified by RC - therefore, they are no longer compatible with the original units.
