

~~Wygolcin~~ at the end of introduction add:

Naur
29

The reference language is a link between hardware languages and handwritten, typed, or printed documentation. For transliteration between the reference language and a language suitable for publications, among others, the following transliteration rules are recommended.

reference language

subscript brackets $[]$

exponentiation

parentheses

$()$

basis of ten

10

publication language

lowering of the line between the brackets

raising of the exponential

any form of parentheses, brackets, braces

raising of the ten and of the following integral numbers, inserting of the intended multiplication sign
